

CONVERTER M-209-B

MARK J. BLAIR, NF6X
MAY 1, 2009

INTRODUCTION

- Description
- History
- Operation
- Q&A
- Demonstration

DESCRIPTION

- Mechanical cipher machine
- Prints plaintext/ciphertext on paper tape
- Light and compact, usable in the field
- No electricity needed
- Simple to operate once keyed

DESCRIPTION

DESCRIPTION

HISTORY

- Model C-35 Hagelin Cryptograph invented by Swedish cryptographer Boris Hagelin around 1934-1935
- Improved models C-36 and C-38 followed
- Hagelin promoted his machines to U.S. government in 1940
- U.S. licensed C-38 with minor modifications, called it Converter M-209

HISTORY

- Over 140,000 machines produced during World War 2 by many companies
- Several versions with minor production variations, including M-209, M-209-A, M-209-B and CSP-1500 (Navy version)
- Used for encryption of low-level tactical traffic throughout World War 2 and the Korean War

OPERATION

- Machine must first be programmed with proper key... more on this later
- Operator sets machine to Cipher or Decipher mode
- Operator dials in each letter with setting knob on left, then turns drive knob on right
- Machine prints each enciphered or deciphered letter on paper tape

OPERATION

- When ciphering, enter 'Z' in place of space
- Ciphertext automatically printed as 5-letter groups
- When deciphering, ignore spaces
- Deciphered 'Z' printed as space
- Text may be read from wheel if out of ink/paper

OPERATION

- Drive knob locks after each letter, until setting knob is turned:
- If setting knob is already set to next letter, turn it back and forth to unlock drive knob

CIPHERING

DECIPHERING

KEYING

- Cipher key consists of two parts:
 - Internal pin and lug settings (changed daily on pre-arranged schedule)
 - External key wheel settings (selected randomly for each message)

SETTING PINS

SETTING LUGS

26 LETTER CHECK

- Easy to make mistakes while setting pins and lugs!
- Key list includes 26 letter test sequence:
 - Set all six key wheels to 'A'
 - Cipher letter 'A' 26 times
 - Compare results to key list

26 LETTER CHECK

LJEWCFWIPRRAZRH BXKNO QGSRK P

KEY WHEELS

- Six key wheels must be set randomly for each ciphered message
- Never use same settings for more than one message!
- Each wheel has different number of positions: 26, 25, 23, 21, 19, 17
- Each wheel advances one position for each ciphered/deciphered letter

KEY WHEELS

- How to securely send each message's key wheel settings to receiving operator?
- Many methods:
 - Include in message in the clear
 - Use pre-arranged schedule
 - Encipher into the message

KEY WHEELS

- Set wheels to random positions:
“External Message Indicator”

KEY WHEELS

- Select a random letter, then cipher it 12 times

JYRXW XEDLH VB

KEY WHEELS

- Select first six valid key wheel settings to get “Internal Message Indicator”

~~JYRXW~~ ~~XEDLH~~ VB

- Use the resulting key wheel settings to cipher the message

MESSAGE INDICATORS

- Ciphertext will include information to let receiving operator recover the key:
 - External Message Indicator (six random letters)
 - Random letter used to generate Internal Message Indicator
 - Key List Indicator (two-letter code which identifies the key list)
